

TELETYPE CORPORATION

5555 TOUHY AVENUE • SKOKIE, ILLINOIS 60076

AREA CODE 312 - 676-1000

FROM THE DESK OF:

Len Jagielo

Dave,

The attached generally describes how selective calling works. On page 2 sequential operation parts are shown. For your type of operation use $n-1$ "slot C's" and 1 (one) "slot D" for every n number of character sequences.

The unencoded function bar can be field coded for any character.
